

RealStar® Respiratory Kit Bundles

SARS-CoV-2, Influenza viruses and RSV cause respiratory tract infections, with very similar symptoms such as fever, cough and headache. A differential diagnosis only based on symptoms is often not possible. Distinguishing those diseases is vital for patient management and epidemiological control. altona Diagnostics offers RealStar® PCR kits for detecting all three pathogens, namely SARS-CoV-2, Influenza viruses and RSV. The ready-to-use kits including Internal Control and Positive Controls are CE-IVD marked and can be performed with the same PCR protocol on one PCR plate.

	RealStar® SARS-CoV-2 RT-PCR Kit 1.0	RealStar® Influenza Screen & Type RT-PCR Kit 4.0	RealStar® RSV RT-PCR Kit 3.0
Detection	SARS-CoV-2 and lineage B-beta coronaviruses	Human Influenza A, B and SwineFlu (H1N1)pdm09	Respiratory Syncytial Virus A and B
BD-001-15	1 x 384 rxn	4 x 96 rxn	4 x 96 rxn
BD-002-15	1 x 384 rxn	4 x 96 rxn	-
BD-003-15	-	4 x 96 rxn	4 x 96 rxn

Each kit bundle can be ordered with a total of 384 reactions per included assay and will be available at special prices in your country. For an individual offer please contact your local sales representative.
